

# Seize your data.

## WHAT CAN YOU LEARN FROM MACHINE DATA ANALYTICS?

### Here are TEN actionable insights you can learn from Clinsights:

By analyzing key machine parameters like helium levels and magnet pressure you can **prevent unplanned machine downtime.**

01

**Schedule staff for training** by reviewing statistics on "retesting" due to operator error.

04

Provide referring physicians and insurers with **protocol usage.**

08

**You can predict when to remove machines from service,** improving uptime and optimizing your capital budget.

02

**Negotiate better rates** on service contracts with major vendors.

05

**Improve machine utilization and staffing** by using the data to correlate patient demand and machine availability

09

**Staffing gets easier** – schedule staffing of all personnel and especially top of license Rad Techs based on patient demand.

03

Create an inventory of parts for high demand equipment to **lower cost of parts replacement and speed up mean time to repair (MTTR).**

06

Develop service plans and scheduling protocols that **inspire confidence from overworked staff** and provide a resilient response to the most challenging healthcare crisis.

10

By integrating Glassbeam Clinsights with patient CMMS data you can **evaluate the impact machine availability** on the wellness of vulnerable populations.
